Reagents and Consumables for ABI Genetic Analyzers

Polymers for dna analyzers

In the past years, ABI has developed a range of separation matrices for the various genetic analysers: ABI310, 3100 AVANT, 3100, 3130, 3130XL, 3730, 3730XL, etc, each polymer customised for specific applications. Among these, the most widely used for DNA sequencing and fragment analysis is POP-7 (Performance Optimized Polymer 3500 Series). Taken these into account, Distribio provides POP-7 for its clients at discounted prices. This polymer is an original ABI product label and is supplied through a <<distributor>>. This makes the price for the end customer to be very competitive compared to the ABI price list.

Selection chart

Instrument	# of capillaries	Polymer loading	Application	Recommended Polymer
ABI3130	4	Pump	Sequencing	POP7
ABI3130 XL	16	Pump	Genotyping	POP7
ABI3730	48	Pump	Sequencing	POP7
ABI3730 XL	96	Pump	Genotyping	POP7

Other ABI consumables

As our objective is to offer our clients the best products at competitive prices, Distribio can provide a selection of ABI consumables, needed by the ABI instruments users. These are ABI original products, most of them in original packages, except the Big Dyes which can be provided as aliquots from larger volumes.
